SUMMARY

Informatics Engineer with 1+ years of experience building end-to-end web applications using modern stacks (MERN, Django, TypeScript). Dedicated to engineering high-quality, automated solutions that eliminate manual bottlenecks. Professional bilingual fluency (English/Spanish), currently expanding into native iOS development.

EDUCATION

Dr. Rafael Belloso Chacín University (URBE)

September 2021 – July 2025

BSc. Informatics Engineering (US Equivalent: Computer Science)

Maracaibo, Zulia

- Cumulative GPA: 3.61 (Honored Cum Laude)
- Placed third in the 2023 problem solving hackathon
- Capstone Project: Web platform for the distribution and authentication of digital documents based on blockchain technology

Open Source Software University (OSSU)

April 2026 – Present

Mathematics

Self-paced

EXPERIENCE

Virtual Assistant and Process Automator

October 2025 – Present

Top of the Line VA

San Jose, CA

- Carried out continuous lead management of realtors in the San Francisco Bay Area with GoHighLevel CRM
- Created and maintained workflow automations for the company's GoHighLevel CRM
- Performed market technical analysis of properties to identify potential fix and flip opportunities
- Cleaned, consolidated and stored thousands of records from MLS datasets using Microsoft Excel

Software Engineer

November 2024 – October 2025

Agencia de Viajes y Turismo Javitour

Maracaibo, Zulia

- Engineered a multi-role payment validator web app with Flask and achieved daily income traceability for 20 users
- Automated 400+ daily ticket issue workflows, reducing manual intervention by 99%, shifting focus to outliers
- Engineered a centralized Django dashboard to unify internal tools and streamline cross-interface accessibility
- Delivered hybrid technical support (on-site/remote) for hardware deployment and software troubleshooting
- Facilitated technical consultations with international software providers to align company's project requirements

PROJECTS

Self-hosted Server | WSL, SMB, Static IP Addressing, RDP and SSH Config

March 2026 – Present

- Deployed and configured multipurpose Windows 11 Enterprise IoT in a physical environment
- Implemented secure RDP endpoint, SSH access, and static IP assignments for reliable remote administration
- Provisioned SMB file sharing to manage decentralized data access across the local network

MLS | Vite, Typescript, React, Django Ninja, Git

February 2026 – Present

- Engineered a streamlined React UI to input complex property data and instantly export formatted listings
- Reduced document preparation time by over 80%, increasing focus on technical property analysis
- Implemented a persistent storage solution using SQLite to archive and retrieve generated templates

Full Stack Open | React, Node.js, Express.js, RESTful APIs

December 2023 – May 2024

- Developed and deployed end-to-end MERN apps, implementing RESTful APIs and complex state management
- Orchestrated app environments using Docker and Docker Compose, streamlining development and deployments
- Architected secure user authentication systems using JWT and BCrypt with Express.js

TECHNICAL SKILLS

Programming Languages: TypeScript, HTML/CSS/JS, Python, SQL (Postgres, MariaDB, SQLite), Swift/SwiftUI

Frameworks: React, Node.js, Express.js, Django, Flask, WordPress

Developer Tools: Linux, Git, Docker, Github Actions

Languages: English (Full Professional Proficiency), Spanish (Native), French (Basic Proficiency)
