SUMMARY

Informatics Engineer with a background focused on backend development and workflow automation. Proven track record of integrating complex REST APIs, handling JSON data transformations, and building event-driven systems that eliminate operational bottlenecks. Proficient in JavaScript/TypeScript and Python, with a deep interest in deploying scalable and efficient workflows. Bilingual (English/Spanish) and highly detail-oriented.

EDUCATION

Dr. Rafael Belloso Chacín University (URBE) September 2021 – July 2025
Informatics Engineering (US Equivalent: BSc. Computer Science) Maracaibo, Zulia

EXPERIENCE

Real Estate Virtual Assistant / Process Automator October 2025 – Present
Top of the Line VA (Remote) San Jose, CA

- Designed and maintained automated workflows and custom pipelines within GoHighLevel CRM
- Cleaned, consolidated and stored thousands of records from MLS datasets using Microsoft Excel
- Performed market technical analysis of properties to identify potential "fix and flip opportunities"

Software Engineer (Support and Operations) November 2024 – October 2025
Agencia de Viajes y Turismo Javitour Maracaibo, Zulia

- Automated 400+ daily ticket issue workflows, reducing manual intervention by 99%, shifting focus to outliers
- Engineered a multi-role payment validator web app with Flask and achieved daily income traceability for 20 users
- Engineered a centralized Django dashboard to unify internal tools and streamline cross-interface accessibility
- Delivered hybrid technical support (on-site/remote) for hardware deployment and software troubleshooting

PROJECTS

Homelab Infrastructure and Private Cloud | *Proxmox, Debian/Ubuntu, SMB, SSH* March 2026 – Present

- Deployed self-hosted n8n automation infrastructure using Proxmox LXC to streamline daily workflows
- Architected and migrated an infrastructure from a legacy Windows Server environment to a Proxmox VE
- Synced with rsync and hardened storage security and data integrity by provisioning LUKS-encrypted filesystems
- Implemented secure remote management by configuring the OpenSSH service to ensure access to the server

MLS | *Vite, TypeScript, React, Django Ninja, Git, SQLite* February 2026 – Present

- Engineered a streamlined React UI to input complex property data and instantly export formatted listings
- Reduced document preparation time by over 80%, increasing focus on technical property analysis
- Implemented a persistent storage solution using SQLite to archive and retrieve generated templates

Digital Infrastructure and Marketing Automation | *HighLevel, WordPress, Hostinger* January 2026 – Present

- Executed a seamless end-to-end migration of WordPress website from legacy environment, ensuring zero downtime
- Designed and implemented end-to-end automation sequences in GoHighLevel, including custom lead-capture forms
- Spearheaded the selection and configuration of digital tools, providing strategic recommendations on tech-stack

Full Stack Open | *Vite, React, Node.js, Express.js, RESTful APIs, SQL, MongoDB* December 2023 – May 2024

- Developed and deployed end-to-end MERN apps, implementing RESTful APIs and complex state management
- Architected secure middleware and user authentication systems using JWT and BCrypt with Express.js
- Orchestrated app environments using Docker and Docker Compose, streamlining development and deployments

TECHNICAL SKILLS

Automation and Integration: n8n (workflows, HTTP Request node, Code node, Webhooks), REST APIs, API Keys, Bearer Tokens, Webhooks, JSON parsing/transformation
Programming Languages: TypeScript, HTML/CSS/JS, Python, SQL (Postgres, MariaDB, SQLite), Swift/SwiftUI
Frameworks: React, Node.js, Express.js (MERN), Django, Flask
Developer Tools: Git, Docker, CI/CD, Proxmox, GNU/Linux, Microsoft Windows, macOS, GoHighLevel, WordPress
Languages: English (Full Professional Proficiency), Spanish (Native), French (Basic Proficiency)
